

# Filter Evaluation for Drinking Water Systems

## Benefits

- Evaluation of physical conditions.
- Expansion of the filter media during the backwash process.
- Surface material analysis (Top Gravel Footprint Analysis).
- Certified professionals and technical staff capable and focused in water quality and treatment unit efficiency.

In recent years, regulations for the treatment of drinking water have been given more restrictions based on the improved Surface Water Treatment Rule focuses on particulate controls and its possible relationship with microorganism. **ETAG Corporation** carries out an evaluations of the filters when these units show signals of problem. You can request more information about our Filter Evaluation for Drinking Water Systems services [here](#).
