

Systems Start Ups

Benefits

- Personnel specialized in start-up processes.
- Custom made start-up strategies for your system.
- Validation and debugging of the units and treatment process.
- Comply with final water quality according to design parameters.

Any potable water or wastewater treatment system, whether new or used substantially, requires a start-up process with the objective of validating the performance of treatment units and equipment. **ETAG Corporation** counts with 28 years of experience of doing this work for clients of the private industry, as well as Puerto Rico Aqueduct and Sewer Authority (PRASA). For more information about our System Start-Up services, you can visit our company [success stories](#) or [request more information](#) about this service.
